Proposal summary

The Ministry is entering its second phase of consultation as part of the development process for the next edition of Ontario's Building Code. This consultation focuses on changes related to the new 2020 National Construction Codes.

Please ask Ontario to reconsider

*a regional climate agency that invests in
reducing carbon emissions*

Climate and affordability depend on these essential building code updates

March 2, 2022 by [Bryan Purcell](#) – [4 Comments](#)

Building codes aren't as exciting as the latest clean tech, or as controversial as carbon pricing. Let's face it, they're boring. But they **are** globally recognized as one of the most effective policy tools for addressing climate change. That's why it's so disappointing that Ontario's [proposed building code](#) update does not include any meaningful changes to reduce carbon emissions or improve energy efficiency and long-term affordability.

Please ask Ontario to be cost efficient

- * Climate crisis is not going away
- * Costs more to retrofit “new” homes later
